Mechatronics was established as an engineering discipline over 50 years ago as the integration of electronics and information technology with mechanical design. Given major technological advances and the growth of systems level concepts such as Cyber Physical Systems and the Internet of Things along with Cloud Technologies and Big Data it's now high time to reconsider the role of mechatronics particularly within engineering design. Past and ongoing technological changes are impacting how systems are designed and configured in ways that could never have been envisaged when the field of mechatronics was first introduced.
