Intelligent Environments 2009 V. Callaghan, A. Kameas, A. Reyes, 2009-07-07 As computers are increasingly embedded into our everyday environments the objects therein become augmented with sensors processing and communication capabilities and novel interfaces The capability for objects to perceive the environment store and process data pursue goals reason about their intentions and coordinate actions in a holistic manner gives rise to the so called Intelligent Environment IE In such environments real space becomes augmented with digital content thus transcending the limits of nature and of human perception The result is a pervasive transparent infrastructure capable of recognizing responding and adapting to individuals in a seamless and unobtrusive way The realization of Intelligent Environments requires the convergence of different disciplines such as information and computer science building architecture material engineering artificial intelligence sociology art and design The 5th International Conference on Intelligent Environments IE 09 held at the Polytechnic University of Catalonia Castelldefels Barcelona Spain provides a multidisciplinary forum for researchers and engineers from across the world to present their latest research and to discuss future directions in the area of Intelligent Environments The IE 09 proceedings contain the complete conference program including full papers presented at special sessions and short papers from the doctoral colloquium and poster session In addition three thought provoking invited lectures on topics of current and future IE research are included

Stream Restoration in Dynamic Fluvial Systems Andrew Simon, Sean J. Bennett, Janine M. Castro, 2013-05-08 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 194 Stream Restoration in Dynamic Fluvial Systems Scientific Approaches Analyses and Tools brings together leading contributors in stream restoration science to provide comprehensive consideration of process based approaches tools and applications of techniques useful for the implementation of sustainable restoration strategies Stream restoration is a catchall term for modifications to streams and adjacent riparian zones undertaken to improve geomorphic and or ecologic function structure and integrity of river corridors and it has become a multibillion dollar industry A vigorous debate currently exists in research and professional communities regarding the approaches applications and tools most effective in designing implementing and assessing stream restoration strategies given a multitude of goals objectives stakeholders and boundary conditions More importantly stream restoration as a research oriented academic discipline is at present lagging stream restoration as a rapidly evolving practitioner centric endeavor The volume addresses these main areas concepts in stream restoration river mechanics and the use of hydraulic structures modeling in restoration design ecology ecologic indices and habitat geomorphic approaches to stream and watershed management and sediment considerations in stream restoration Stream Restoration in Dynamic Fluvial Systems
