Department of the Army,1985      *A User's Manual for a Method of Map Scanning and Digital Editing for Thematic Map Production and Data-base Construction* ,1990      Operator's Manual for Radar Set AN/MPQ-4A (NSN 5840-00-543-0759). ,1977      **General Purpose Simulation System V User's Manual** ,1977      **Mainframe Computer Systems** Stephen H. Kaisler,2020-10-22 This volume describes General Electric Corporation s venture into developing second and third generation mainframe computer systems The General Electric Corporation GE which began its life as the Edison Electric Co was long involved in electrical appliances and industrial machines It was also a founder of the Radio Corporation of America which eventually became one of its competitors and developed many electrical systems in order to control different types of industrial machines Its breakthrough into computing came with its winning bid to provide the computing systems for the Electronic Recording Method of Accounting system developed for the Bank of America by the Stanford Research Institute The success of this project led GE to develop the GE 200 series which was the foundation for commercial timesharing The GE 235 was selected by Dartmouth for its Dartmouth Time Sharing System DTSS an innovative academic time sharing system BASIC was developed on the GE 235 computer system under DTSS GE enhanced it to develop its Mark II III Time Sharing System apparently the first commercial time sharing service in the world GE develop the GE 300 400 systems for industrial process control The GE 600 series replaced the GE 200 series and demonstrated innovation in time sharing systems The GE 645 was selected to host Multics which was developed by MIT However GE felt that it could not compete in computing against IBM Univac and other mainframes competitors so it folded its tent and sold its Computer Division to Honeywell Inc Nevertheless GE will be remembered for many innovations which continue to be used in modern computing systems      Interventional Magnetic Resonance Imaging Jörg F. Debatin, Gerhard Adam,2012-12-06 One of the most amazing and spectacular developments in modern radiology has been the rapid growth and expansion of so called interventional radiology which can also be described as minimally invasive therapy guided by radiological imaging Many applications of this method are now widely in use in different organs particularly in the vascular system Everybody is well aware of the shortcomings and drawbacks of the radiological modalities currently used for guiding minimally invasive procedures Ultrasound although it has the advantage of being absolutely harmless to the patient and the operator cannot be used for many procedures because it does not provide the precise anatomical information needed for a safe performance of these procedures Rontgen rays provide superb anatomical insight to guide delicate manipulations inside the human body but as operations tend to become longer and more complicated the radiation dose for patients as well as for operators is becoming an increasing source of concern It is therefore logical that we should explore the possibilities for interventional radiological procedures provided by the latest imaging modality magnetic resonance imaging taking advantage of the

specific physical properties of this method and the absence of ionizing radiation It soon became evident that this new approach represents a tremendous challenge involving the development of new hardware and software new catheters and other material that can be used in a magnetic environment etc

*Mech* ,1989 **Remote Sensing Digital Image Analysis** John A. Richards,2013-04-17 With the widespread availability of satellite and aircraft remote sensing image data in digital form and the ready access most remote sensing practitioners have to computing systems for image interpretation there is a need to draw together the range of digital image processing procedures and methodologies commonly used in this field into a single treatment It is the intention of this book to provide such a function at a level meaningful to the non specialist digital image analyst but in sufficient detail that algorithm limitations alternative procedures and current trends can be appreciated Often the applications specialist in remote sensing wishing to make use of digital processing procedures has had to depend upon either the mathematically detailed treatments of image processing found in the electrical engineering and computer science literature or the sometimes necessarily superficial treatments given in general texts on remote sensing This book seeks to redress that situation Both image enhancement and classification techniques are covered making the material relevant in those applications in which photointerpretation is used for information extraction and in those wherein information is obtained by classification
