

4 Hardware Commands

4.1 Turning ON the GE865

To turn on the GE865 the pad ON# must be tied low for at least 1 seconds and then released. The maximum current that can be drained from the ON# pad is 0,1 mA.
A simple circuit to do it is:

NOTE: don't use any pull up resistor on the ON# line, it is internally pulled up. Using pull up resistor may bring to latch up problems on the GE865 power regulator and improper power on/off of the module. The line ON# must be connected only in open collector configuration.

NOTE: In this document all the lines that are inverted, hence have active low signals are labeled with a name that ends with '#' or with a bar over the name.

TIP: To check if the device has powered on, the hardware line PWRMON should be monitored. After 900ms the line raised up the device could be considered powered on.
