Education as the Driving Force of Equity for the Marginalized Boivin, Jacquelynne Anne, Pacheco-Guffrey, Heather, 2022-01-14 In the USA racism is the most widespread root of oppression Black people in

America specifically have suffered from centuries of discrimination and still struggle to receive the same privileges as their white peers. In other countries however there are other groups that face similar struggles. Discrimination and oppression based on religion, ethnicity, socio-economic status, political affiliation and caste are just a few categories. However, education is a root for widespread societal change, making it essential that educators and systems of education enact the changes that need to occur to achieve equity for the groups being oppressed. Education as the Driving Force of Equity for the Marginalized highlights international research from the past decade about the role education is playing in the disruption and dismantling of perpetuated systems of oppression. This research presents the context, ideas and mechanics behind impactful efforts to dismantle systems of oppression. Covering topics such as teacher preparation, gender inequality and social justice, this work is essential for teachers, policymakers, college students, education faculty, researchers, administrators, professors and academicians.

The Geometry of Biological Time Arthur T. Winfree, 2013-06-29 As I review these pages, the last of them written in Summer 1978, some retrospective thoughts come to mind which put the whole business into better perspective for me and might aid the prospective reader in choosing how to approach this volume. The most conspicuous thought in my mind at present is the diversity of wholly independent explorations that came upon phase singularities in one guise or another during the past decade. My efforts to gather the published literature during the last phases of actually writing a whole book about them were almost equally divided between libraries of Biology, Chemistry, Engineering, Mathematics, Medicine and Physics. A lot of what I call gathering was done somewhat in anticipation in the form of conjecture, query and prediction based on analogy between developments in different fields. The consequence throughout 1979 was that our long suffering publisher repeatedly had to replace such material by citation of unexpected flurries of papers giving substantive demonstration. I trust that the authors of these many excellent reports and especially of those I only found too late will forgive the brevity of allusion. I felt compelled to observe in these substitutions a residue of loose ends is largely collected in the index under QUERIES. It is clear to me already that the materials I began to gather several years ago represented only the first flickering of what turns out to be a substantial conflagration.

Rural Depopulation in England and Wales, 1851-1951 John Saville, 2013-10-08 First Published in 1998 This book aims to accommodate for the little attention paid to the needs of the people living in rural Britain. The author argues that there has hardly been an attempt to describe the impact of new machines and of new wage levels on farm and village. The title sets out to answer two key questions: can the traditional pattern of settlement survive and has depopulation in the truly rural areas gone so far as to undermine the viability of the small villages and hamlets?
