It gathers the most prominent experts in numerical methods in sheet forming processes and is an outstanding forum for the exchange of ideas and for the discussion of technologies related to sheet metal forming processes. Topics covered in this volume include but are not limited to the following: Materials Modeling and Experimental Testing Methods; Friction and Contact; Formability; Necking and Fracture; Instabilities and Surface Defects; Fracture and Damage; Numerical Methods; Springback; Incremental Sheet Forming; Roll Forming; Innovative Forming Methods; Product and Process Design and Optimization Research in British Universities, Polytechnics and Colleges, 1979 *Hopf Algebras and Generalizations* Louis H. Kauffman, David E. Radford, Fernando José Oliveira Souza, 2007 Hopf algebras have proved to be very interesting structures with deep connections to various areas of mathematics particularly through quantum groups. Indeed the study of Hopf algebras, their representations, their generalizations and the categories related to all these objects has an interdisciplinary nature. It finds methods, relationships, motivations and applications throughout algebra, category theory, topology, geometry, quantum field theory, quantum gravity and also combinatorics, logic and theoretical computer science. This volume portrays the vitality of contemporary research in Hopf algebras. Altogether the articles in the volume explore essential aspects of Hopf algebras and some of their best known generalizations by means of a variety of approaches and perspectives. They make use of quite different techniques that are already consolidated in the area of quantum algebra. This volume demonstrates the diversity and richness of its subject. Most of its papers introduce the reader to their respective contexts and structures through very expository preliminary sections **Catalog of Copyright Entries. Third Series** Library of Congress.
