

WHAT IS GEOGRAPHY?

Geography is the study of places and the relationships between people and their environments.

A geographer is a physical scientist, social scientist or humanist whose area of study is geography. They explore the physical properties of Earth and the human behaviour across it.

There are three types of geography: physical geography (*the effects it has on people and the environment*), human geography (*concerned with people*) and environmental geography (*how people behaviour can affect the environment*).

The Children's Book Business Lissa Paul, 2010-12-14 In The Children's Book Business Lissa Paul constructs a new kind of book biography By focusing on Eliza Fenwick's 1805 product placement novel Visits to the Juvenile Library in the context of Marjorie Moon's 1990 bibliography Benjamin Tabart's Juvenile Library Paul explains how twenty first century cultural sensibilities are informed by late eighteenth century attitudes towards children reading knowledge and publishing The thinking knowing children of the Enlightenment she argues are models for present day technologically connected socially conscious children the increasingly obsolete images of Romantic innocent and ignorant children are bracketed between the two periods By drawing on recent scholarship in several fields including book history cultural studies and educational theory

The Children's Book Business provides a detailed historical picture of the landscape of some of the trade practices of early publishers and explains how they developed in concert with the progressive pedagogies of several female authors including Eliza Fenwick, Mary Wollstonecraft, Anna Barbauld, Maria Edgeworth, and Ann and Jane Taylor. Paul's revisionist reading of the history of children's literature will be of interest to scholars working in eighteenth-century studies, book history, childhood studies, cultural studies, educational history, and children's literature.

21st-Century Statecraft Nayef Al-Rodhan, 2022-07-28. From civilisational frontier risks associated with new challenges like disruptive technologies to the shifting nature of great power conflicts and subversion, the 21st century requires a new approach to statecraft. In *21st Century Statecraft*, Professor Nayef Al-Rodhan proposes five innovative statecraft concepts. He makes the case for a new method of geopolitical analysis called meta-geopolitics and for dignity-based governance. He shows how, in an interdependent and interconnected world, traditional thinking must move beyond zero-sum games and focus on multi-sum and symbiotic realist interstate relations. This requires a new paradigm of global security premised on five dimensions of security and a new concept of power: just power, which highlights the centrality of justice to state interests. These concepts enable states to balance competing interests and work towards what the author calls reconciliation statecraft. Throughout, Professor Al-Rodhan brings his philosophical and neuroscientific expertise to bear, providing a practical model for conducting statecraft in a sustainable way.

Teachers' Personal Epistemologies Gregory Schraw, Jo Lunn Brownlee, Lori Olafson, Michelle Vander Veldt Brye, 2017-07-01. The focus of this book is to explore teachers' evolving personal epistemologies or the beliefs we hold about the origin and development of knowledge in the context of teaching. The chapters focus on a range of conceptual frameworks about how university and field-based experiences influence the connections between teachers' personal epistemologies and teaching practice. In an earlier volume, we investigated preservice and inservice teachers' beliefs and teaching practices. Brownlee, Schraw, and Berthelsen (2011). While we addressed the nature of teachers' personal epistemologies, learning and teaching practices, and approaches for changing beliefs throughout teacher education programs, the volume did not address conceptual frameworks for the development of teachers' personal epistemologies. To address this gap, the book is focused on teacher educators, teachers, and teacher education programmers in universities with an overall aim of highlighting how we might support preservice teachers' involvement in learning that is challenging and inservice

teachers engagement in professional experiences that promote changes in teaching practice We argue that teachers need to be encouraged to question their beliefs and develop increasingly sophisticated beliefs about their knowledge and their students knowledge that facilitate learning and intellectual growth Being Useful Miroslav Nincic, Joseph Lepgold, 2000
