n dimensional space Many properties of convex sets can be discovered using just the linear structure However for more interesting results it is necessary to introduce the notion of distance in order to discuss open sets closed sets bounded sets and compact sets The book illustrates the interplay between these linear and topological concepts which makes the notion of convexity so interesting Thoroughly class tested the book discusses topology and convexity in the context of normed linear spaces specifically with a norm topology on an n dimensional space Geometry of Convex Sets also features An introduction to n dimensional geometry including points lines vectors distance norms inner products orthogonality convexity hyperplanes and linear functionals Coverage of n dimensional norm topology including interior points and open sets accumulation points and closed sets boundary points and closed sets compact subsets of n dimensional space completeness of n dimensional space sequences equivalent norms distance between sets and support hyperplanes Basic properties of convex sets convex hulls interior and closure of convex sets closed convex hulls accessibility lemma regularity of convex sets affine hulls flats or affine subspaces affine basis theorem separation theorems extreme points of convex sets supporting hyperplanes and extreme points existence of extreme points Krein Milman theorem polyhedral sets and polytopes and Birkhoff's theorem on doubly stochastic matrices Discussions of Helly's theorem the Art Gallery theorem Vincensini's problem Hadwiger's theorems theorems of Radon and Caratheodory Kirchberger's theorem Helly type theorems for circles covering problems piercing problems sets of constant width Reuleaux triangles Barbier's theorem and Borsuk's problem Geometry of Convex Sets is a useful textbook for upper undergraduate level courses in geometry of convex sets and is essential for graduate level courses in convex analysis An excellent reference for academics and readers interested in learning the various applications of convex geometry the book is also appropriate for teachers who would like to convey a better understanding and appreciation of the field to students I E Leonard PhD was a contract lecturer in the Department of Mathematical and Statistical Sciences at the University of Alberta The author of over 15 peer reviewed journal articles he is a technical editor for the Canadian Applied Mathematical Quarterly journal J E Lewis PhD is Professor Emeritus in the Department of Mathematical Sciences at the University of Alberta He was the recipient of the Faculty of Science Award for Excellence in Teaching in 2004 as well as the PIMS Education Prize in 2002
