The intention of this symposium was to bring together leading researchers from the fields of reaction dynamics, kinetics, catalysis, and reactive flow modeling to discuss and review the advances in the understanding of chemical kinetics about 100 years after Max Bodenstein's pioneering work on the hydrogen iodine reaction which he carried out at the Chemistry Institute of the University of Heidelberg. The idea to focus in his doctoral thesis 1 on this reaction was brought up by his supervisor Victor Meyer, successor of Robert Bunsen at the Chemistry Institute of the University of Heidelberg, and originated from the non-reproducible behaviour found by Bunsen and Roscoe in their early photochemical investigations of the H_2/Cl_2 system 2 and by van't Hoff 3 and V. Meyer and co-workers 4 in their experiments on the slow combustion of H_2/O_2 mixtures.
