Republics of Knowledge Nicola Miller,2025-02-18 Republics of Knowledge tells the story of how the circulation of knowledge shaped the formation of nation states in Latin America and particularly in Argentina Peru and Chile during the century after Iberian rule was defeated in the 1820s Most immediately the author has sought to provide a cross disciplinary approach to the history of knowledge combining the methods of global intellectual history with a new way of thinking about nations as experienced and enacted as well as how they are imagined and in so doing offer a new interpretation of the history of independent Latin America to illustrate its wider significance in the making of the modern world By bringing these lines of inquiry together within a transnational framework Nicola Miller shows how evidence from the pioneering nations of Latin America can invite historians to rethink many of their general theories about how knowledge travels and how a sense of nationhood is created The book is designed to stimulate debate

about the significance of knowledge not only in Latin America but in all modern societies As Miller explains Latin America is usually regarded as an exception to general theories notably of colonialism nationalism and liberalism and yet it was in that part of the world not in Europe that the Age of Revolution brought the founding of a second wave of modern republics and it was in Latin America that pioneering attempts were made to apply liberal principles in societies with inherited caste divisions and corporate institutions It was there that some of the richest debates about the vexed relationship between collective identities and individualism took place

Unique Latin Fare Noah Garcia, AI, 2025-01-29 *Unique Latin Fare* presents an extraordinary journey through the lesser known culinary landscape of Latin America documenting rare dishes and endangered cooking traditions across twenty countries This meticulously researched work goes beyond familiar Latin American staples to uncover hidden gastronomic treasures from indigenous

preparations of wild Andean tubers to unique fusion dishes like Ecuador's African influenced garrapata soup and regional variations of Chinese Peruvian chifa cuisine. The book's three part structure thoughtfully progresses from pre-Columbian cooking methods still practiced in indigenous communities to colonial era fusion cuisines and finally to contemporary adaptations of ancestral techniques. Through extensive fieldwork spanning five years, readers gain intimate access to remote villages, local markets, and family kitchens, learning not just recipes but the cultural significance, spiritual connections, and social customs surrounding each dish. The research seamlessly weaves together archaeological findings, traditional farming methods, and preservation techniques that have shaped regional gastronomy. What sets this work apart is its practical approach to documenting endangered culinary traditions, offering detailed guidance on specialized cooking techniques while acknowledging modern challenges of ingredient availability. Whether exploring traditional fermentation methods or earthen oven cooking, the book serves both as a scholarly reference and a practical guide for food historians, professional chefs, and passionate home cooks eager to explore authentic Latin American cuisine beyond conventional boundaries.

[The Hydraulic State](#) Charles R. Ortloff, 2020-08-12. The Hydraulic State explores the hydraulic engineering technology underlying water system constructions of many of the ancient World Heritage sites in South America, the Middle East, and Asia, as used in their urban and agricultural water supply systems. Using a range of methods and techniques, some new to archaeology, Ortloff analyzes various ancient water systems such as agricultural field system designs known in ancient Peruvian and Bolivian Andean societies, water management at Nabataean Petra, the Roman Pont du Gard water distribution castellum, the Minoan site of Knossos, and the water systems of dynastic and modern China, particularly the Grand Canal and early water systems designed to control flood episodes. In doing so, the book greatly increases our understanding of the hydraulic/hydrological engineering of ancient societies through the application of Complexity Theory, Similitude Theory, and Computational Fluid Dynamics (CFD) analysis, as well as traditional archaeological analysis methods. Serving to highlight the engineering science behind water structures of the ancient World Heritage sites discussed, this book will be of interest to archaeologists working on landscape archaeology, urbanism, agriculture, and water management.
