LAB EXERCISE 5: Lizard Evolution Virtual Lab

Answer the following questions as you finish each module of the virtual lab.

MODULE 1: Introduction

At the beginning of the virtual lab, you were asked to select eight lizards from a category. What criteria did you use to select your lizards?

My criteria were: size, color, and shape of the lizards.

Did your lizards grow similar? How? Why?

Yes, they all grew to the same size. I thought about growing to the same size because they were all the same species and I thought they would grow to the same size.

An adaptation is a structure or function that the organism has as a population because it increases the ability to survive and reproduce in a particular environment. Provide one example and an explanation of an adaptation of the lizard you chose.

The adaptation of the lizard was its color. It was green and brown, which helped it blend in with the environment. It was also a lizard, which helped it survive in the environment.

Provide one evolutionary explanation for why lizards that are not growing to the same size (i.e., the green) would have survived a bottleneck.

One evolutionary explanation for why lizards that are not growing to the same size would have survived a bottleneck is that they were the only ones left after the bottleneck.
