UNIT INJECTOR DELIVERY EQUALIZATION PREPARATION

Due to the fact that unit injectors are both injection pump and injector, all unit injectors within a 7000 class engine must be equalized to facilitate the correct delivery of fuel under individual cylinders. The equalization procedure is a operational test with the valve cover removed. Therefore, proper eye protection must be worn and great care must be taken to insure no body or clothing contact with rotating engine components.

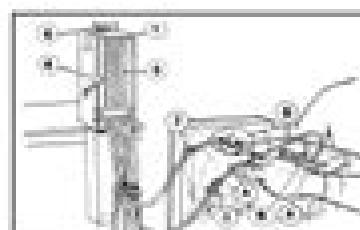

After carefully removing the engine valve cover, install a 1000T (20-1000) pressure and flow meter panel at position (1) as shown. Prepare to install the test as shown and read it a large scale of light and low of oil pressure to the engine during the operation procedure presented below.

NOTE: Refer to the fuel system, INJECTOR CONTROLS, (each) and GOVERNOR ADJUSTMENT PROCEDURES.

UNIT INJECTOR DELIVERY EQUALIZATION PREPARATION (cont.)

Remove the fuel manifold assembly (1), in place of the fuel manifold, install an equalization fuel passage. Please note that early versions of the unit injector and late versions of the unit injector require different fuel heads. Please refer to page 58 for further details.

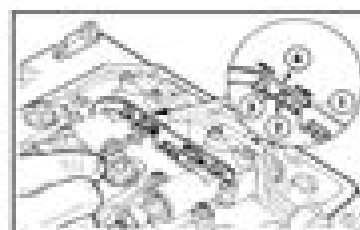

EQUALIZATION FUEL INSTALLATION, PLUMBING

Place the equalization fuel, on a clean surface, with the base of the equalization fuel at least 1/2 inch higher than the rest of the unit injector. Place all electricals in. Remove fuel cap and fill the reservoir with clean diesel fuel. With reference to the diagram, connect the upper hoses (coming from the equalization) to the fuel head position (A). The hoses should be connected to the fuel heads in a logical manner. That is, the left most hose should be connected to the 1 unit injector (fuel head) and then subsequent hoses from left to right, connected to cylinders 2, 3, 4, as required. Connect the upper hose (B) to the fuel head position (B). Make sure that the control hose (C) is in the upper position.

After completion of the hose routing/plumbing, open the valves (2, 3). Start the engine and allow to idle. Increase and read the engine speed (7000 rpm). Once the engine operates smoothly and the 7000 rpm is reconfirmed, pull the control lever(s) downward for approximately one (1) minute. While closely watching the fuel level in the cylinder taper(s), note the rate at which fuel is consumed. **NOTE:** The control lever(s) must be returned to the upper position prior to fuel injection in the taper(s).

During operation with the control lever down, determine the cylinder(s) which are consuming more fuel as indicated by the speed at which the fuel is depleted from each individual taper(s). Delivery rate in each cylinder should be within 2 in³ during one (1) minute of operation. Repeat the fuel delivery rate in the cylinder(s) consuming the most fuel. Delivery may be adjusted as follows:

FUEL METER ADJUSTMENT DETAILS

To increase the fuel delivery of an individual unit injector, the injector fuel must be moved slightly toward the flywheel end of the engine. With reference to the figure on the left, loosen screws (1) and (2) 1/2 turn. Increase the cylinder fuel delivery by moving plate (A) slightly towards the flywheel. Fuel changing the relative position of control rod (3). Restrictions in fuel delivery can be facilitated by moving the plate away from the flywheel. After adjustment, tighten screws (1) and (2) to 1-1 1/2 lbs.

Repeat the equalization test until the individual cylinder fuel consumption is within 2 in³ during a one (1) minute period.

NOTE: The equalization procedure should be performed following an injector
