

PREPARING your crop FOR BALING

Proper preparation of the crop you are going to bale with your baler is important. By following the recommended practices in mowing and raking, you'll get your crop in better condition, make better bales, and do faster work. You will be able to keep the baler going at full capacity, and at the same time, protect it against overloading and strains that lead to excessive wear and delaying breakdowns.

Mowing should be done so that you can follow in the same direction with your rake and baler. While rocks and other natural hazards may determine your exact course, efficiency studies show that you save time by starting at the outside, mowing around the entire field, and finishing in the center. If it is necessary to cross irrigation ditches, borders, or grassed waterways, you should mow in a direction that will keep the number of crossings to a minimum. This will reduce the possibility of damaging your baler.

Raking should be done with a side delivery type rake so that you'll have

straight, uniformly filled windrows for fast, efficient baling. Moist hay is ready to be raked when its stems are stiff enough to stand without drooping. Hay that's raked too green ropes together and is hard to bale. Loose, fluffy windrows are ideal for baling. You'll do a cleaner job of raking if you travel in the same direction that the mower traveled. You will get better quality hay, too. It puts more of the leaves inside the windrow, gives you uniform drying with less loss of color. It is important to rake and turn all of the hay. Unraked hay under the windrow does not dry properly and it is hard for the baler to pick up.

The speed of baling and size of windrows will vary with crop and field conditions. A 7-foot swath will usually give the best size windrows for good baling. A good rule to follow is to first determine the correct throttle setting on the tractor, or engine (if engine driven), to maintain a plunger speed of 68 to 75 r.p.m. Then, starting in low gear, determine the best gear speed which crop and field conditions permit. Windrows of the correct size (Illustr. 6A) will help you cover more acres and turn out more bales per day, with less risk of overloading your baler.

Right

Illustr. 6A — Medium-sized, uniformly filled windrows mean greater baling efficiency. Your crop dries properly. You get steady, even feeding to match the capacity of your baler.

Wrong

Illustr. 6B — Heavy, bunched windrows dry unevenly. They're hard to pick up, and feed slugs to your baler that can cause damaging overloads. Windrows that are too small limit your daily tonnage.
