Randomized Algorithms Rajeev Motwani, Prabhakar Raghavan, 1995-08-25 This book presents basic tools from probability theory used in algorithmic applications with concrete examples

Design of Modern Communication Networks

Christofer Larsson, 2014-03-05 *Design of Modern Communication Networks* focuses on methods and algorithms related to the design of communication networks using optimization graph theory probability theory and simulation techniques The book discusses the nature and complexity of the network design process then introduces theoretical concepts problems and solutions It demonstrates the design of network topology and traditional loss networks followed by uncontrolled packet networks flow controlled networks and multiservice networks Access network design is reviewed and the book concludes by considering the design of survivable reliable networks and various reliability concepts A toolbox of algorithms The book provides practical advice on implementing algorithms including the programming aspects of combinatorial algorithms Extensive solved problems and illustrations Wherever possible different solution methods are applied to the same examples to compare performance and verify precision and applicability Technology independent Solutions are applicable to a wide range of network design problems without relying on particular technologies

Experimental and Efficient Algorithms

Comprehensive

Functional Verification Bruce Wile, John Goss, Wolfgang Roesner, 2005-05-26 One of the biggest challenges in chip and system design is determining whether the hardware works correctly That is the job of functional verification engineers and they are the audience for this comprehensive text from three top industry professionals As designs increase in complexity so has the value of verification engineers within the hardware design team In fact the need for skilled verification engineers has grown dramatically functional verification now consumes between 40 and 70% of a project's labor and about half its cost Currently there are very few books on verification for engineers and none that cover the subject as comprehensively as this text A key strength of this book is that it describes the entire verification cycle and details each stage The organization of the book follows the cycle demonstrating how functional verification engages all aspects of the overall design effort and how individual cycle stages relate to the larger design process Throughout the text the authors leverage their 35 plus years experience in functional verification providing examples and case studies and focusing on the skills methods and tools needed to complete

each verification task Comprehensive overview of the complete verification cycle Combines industry experience with a strong emphasis on functional verification fundamentals Includes real world case studies **DNA Based Computers III** Harvey Rubin, David Harlan Wood, 1999 This volume presents the proceedings from the third DIMACS workshop on DNA Based Computers held at the University of Pennsylvania Philadelphia The workshop was part of the Special Year on Molecular Biology and the Special Year on DNA Computing The focus of this workshop was on the multidisciplinary nature of the conference with emphasis on the interaction between biology and biochemistry on one hand and computer science and mathematics on the other **Mathematics of Industrial Systems** Rainer E. Burkard, 2002 **Government Reports Announcements & Index**, 1996 Randomized Algorithms Rajeev Motwani, Prabhakar Raghavan, 2014-05-10 Presents basic tools from probability theory used in algorithmic applications with concrete examples **Rajeev Motwani: Publications**, Lists book chapters and books written by Rajeev Motwani an assistant professor in the Theory Division of Stanford University's Computer Science Department Includes a subtitle description the publisher and the publishing date of such titles as Probabilistic Algorithms The Robot Localization Problem Randomized Algorithms and Approximation Algorithms Posts information on how to obtain print copies and provides access to the author's home page **Randomized Algorithms Approximating Solutions of Ordinary Differential Equations** Tomasz Bochacik, 2023 **Randomization Methods in Algorithm Design** Panos M. Pardalos, Sanguthevar Rajasekaran, 1999 This volume is based on proceedings held during the DIMACS workshop on Randomization Methods in Algorithm Design in December 1997 at Princeton The workshop was part of the DIMACS Special Year on Discrete Probability It served as an interdisciplinary research workshop that brought together a mix of leading theorists algorithmists and practitioners working in the theory and implementation aspects of algorithms involving randomization Randomization has played an important role in the design of both sequential and parallel algorithms The last decade has witnessed tremendous growth in the area of randomized algorithms During this period randomized algorithms went from being a tool in computational number theory to finding widespread applications in many problem domains Major topics covered include randomization techniques for linear and integer programming problems randomization in the design of approximate algorithms for combinatorial problems randomization in parallel and distributed algorithms practical implementation of randomized algorithms de randomization issues and pseudo random generators This volume focuses on theory and implementation aspects of algorithms involving randomization It would be suitable as a graduate or advanced graduate text Notes on Randomized Algorithms James Aspnes, 2014-12-05 Notes on Randomized Algorithms By James Aspnes
