

B. The model 619 (B-B-2) is shipped with switch connected as shown in Figure 4 with red and white cable conductors connected to switch terminals #4 and #3 respectively, for operation of an external relay. To reverse connections for electronic switching, perform the following steps (Figure 5):

1. Move red cable conductor from terminal #4 to terminal #3.
2. Connect cable shield to terminal #4.
3. Remove switch assembly to proper position and tighten switch assembly "hold down" screws. Replace cover plate.

Note: Circuit returns for electronic switching is via the cable shield. Alternating currents substantially higher than microphone levels are likely to introduce noise into the microphone circuit and should not be switched by this means. For best results, only DC should be transmitted through the cable shield.

## CHANGING SWITCH LOCATION

This microphone is designed for push-to-talk or grip-to-talk operation. When received from the factory, the switch is mounted on the base for push-to-talk use. If desired, the switch may be re-located without any wiring changes to the back of the microphone for grip-to-talk operation.

To relocate the switch, proceed as follows:

1. Remove the black plastic cover from the back of the microphone by gently lifting one end with a flat blade. This will expose the grip-to-talk switch opening. Save the cover — it will be needed for the opening on the base of the microphone.
2. Remove two screws and the corner plate from the bottom of the microphone.
3. Slip strain relief "R", (Figure ①) from slot.
4. Remove screw "A", (Figure ①) and gently lift switch assembly "J" and red switch bar "C" away from microphone housing.
5. Separate red switch bar "C" from switch assembly by lifting switch legs "D" away from the microphone housing.
6. Rotate the red switch bar 90-degrees. Insert tab "P" on switch bar in slot "T" on switch assembly (Figure ②) Square legs "D" together and insert in slot on switch bar.
