#### DESCRIPTION AND APPLICATIONS

The ST350B is a wide-angle constant-directivity tweeter. The constant-directivity characteristic of this tweeter ensures the ability to cover a zone essentially 120° wide horizontally by 70° wide vertically at virtually any frequency within its intended operational range. This tweeter, originally introduced in EV monitor systems in 1972, represents a pioneering effort by EV engineering to design and offer a high-frequency transducer employing the unique advantages of constant-directivity operation.

The ST350B will normally be used in conjunction with other loudspeakers (cone or horn loaded) to create a wide-range two- or three-way system. Such a system will need to employ an electrical crossover-equalizer and may, at the user's option, include a tweeter protector (such as the EV STR) and an "L-pad" form of attenuator (such as the EV AT38). Because of the ST350B's high level of efficiency, its acoustical output for a given electrical input will generally exceed that of almost all direct-radiator (cone) loudspeakers, making output level adjustment necessary by appropriate "padding" of the tweeter input.

#### FREQUENCY RESPONSE

As with any horn tweeter that combines high quality with constant-directivity characteristics, the "Tall
