Smith,2013-06-29 The goals of the science of photobiology can be divided into four categories to develop 1 ways to optimize the beneficial effects of light on man and his environment 2 methods to protect organisms including man from the detrimental effects of light 3 photochemical tools for use in studies of life processes and 4 photochemical therapies in medicine To achieve these goals will require the knowledgeable collaboration of biologists chemists engineers mathematicians physicians and physicists because photobiology is a truly multidisciplinary science While a multidisciplinary science is more intellectually demanding it also has a greater potential for unexpected breakthroughs that can occur when data from several areas of science are integrated into new concepts for theoretical or practical use Photochemical and Photobiological Reviews continues to provide in depth coverage of the many specialty areas of photobiology It is hoped that these reviews will provide an important service to the younger scientists in the field and to senior scientists in related fields because they provide a ready access to the recent literature in the field and more importantly they frequently offer a critical evaluation of the direction that the field is taking or suggest a redirection when appropriate Since it is important that this review series remain responsive to the needs of photochemists and photobiologists the Editor would value comments and suggestions from its readers Journal of the Optical Society of America and Review of Scientific Instruments Optical Society of America,1923 **Journal of the Optical Society of**
