PSpice for Circuit Theory and Electronic Devices Paul Tobin, 2022-05-31 PSpice for Circuit Theory and Electronic Devices is one of a series of five PSpice books and introduces the latest Cadence Orcad PSpice version 10.5 by simulating a range of DC and AC exercises It is aimed primarily at those wishing to get up to speed with this version but will be of use to high school students undergraduate students and of course lecturers Circuit theorems are applied to a range of circuits and the calculations by hand after analysis are then compared to the simulated results The Laplace transform and the s plane are used to analyze CR and LR circuits where transient signals are involved Here the Probe output graphs demonstrate what a great learning tool PSpice is by providing the reader with a visual verification of any theoretical calculations Series and parallel tuned resonant circuits are investigated where the difficult concepts of dynamic impedance and selectivity are best understood by sweeping different circuit parameters through a range of values Obtaining semiconductor device characteristics as a laboratory exercise has fallen out of favour of late but nevertheless is still a useful exercise for understanding or modelling semiconductor devices Inverting and non inverting operational amplifiers characteristics such as gain bandwidth are investigated and we will see the dependency of bandwidth on the gain using the performance analysis facility Power amplifiers are examined where PSpice Probe demonstrates very nicely the problems of cross over distortion and other problems associated with power transistors We examine power supplies and the problems of regulation ground bounce and power factor correction Lastly we look at MOSFET device characteristics and show how these devices are used to form basic CMOS logic gates such as NAND and NOR gates

Scientific Computing in Electrical Engineering Wilhelmus H. Schilders, E. Jan W. ter Maten, Stephan H. M. J. Houben, 2004-08-11 This book presents the proceedings of the 4th International Workshop Scientific Computing in Electrical Engineering held in Eindhoven The Netherlands from June 23-28 2002 This workshop followed three earlier workshops held in 1997 at the Darmstadt University of Technology in 1998 at the Weierstrass Institute for Applied Analysis and Stochastics and in 2000 at the University of Rostock The main topics of SCEE 2002 were computational electrodynamics circuit simulation and coupled problems The objective of the workshop which was mainly directed at mathematicians and electrical engineers was to bring together scientists from universities and industry with the goal of intensive discussions about modelling and numerical simulation of electronic circuits and electromagnetic fields A special feature was the Industry Day where distinguished speakers discussed the needs of industry in the field of computational electromagnetics and circuit simulation The book contains papers of invited and contributed talks as well as from poster presentations
