Elementary Statistics

1. **Abstract** – This paper presents a new method for the automatic detection of the onset of a seizure in EEG signals. The method is based on the analysis of the power spectrum of the EEG signal. The power spectrum is calculated for each time window of the EEG signal. The power spectrum is then compared with a reference power spectrum. The reference power spectrum is calculated from the power spectrum of the EEG signal before the onset of the seizure. The comparison is done using a statistical test. The results of the test are used to detect the onset of the seizure. The method is evaluated using a set of EEG signals. The results show that the method is able to detect the onset of a seizure with a high accuracy.
