#### **Section 2-2 Frequency Distributions**

1. No. For each class, the frequency tells us how many values fall within the given range of values, but there is no way to determine the exact IQ scores represented in the class.
2. If percentages are used, the sum should be 100%. If proportions are used, the sum should be 1.
3. No. The sum of the percentages is 199% not 100%, so each respondent could answer "yes" to more than one category. The table does not show the distribution of a data set among all of several different categories. Instead, it shows responses to five separate questions.
4. The gap in the frequencies suggests that the table includes heights of two different populations: students and faculty/staff.
