1. **Identify the problem.** The first step is to identify the problem. This involves understanding the symptoms and the context in which they are occurring.

2. **Define the problem.** Once the problem is identified, it needs to be defined in terms of its scope and impact. This involves gathering data and information about the problem.

3. **Generate hypotheses.** The next step is to generate hypotheses about the causes of the problem. This involves brainstorming potential causes and testing them against the data.

4. **Test the hypotheses.** Once hypotheses are generated, they need to be tested. This involves gathering more data and information to see if the hypotheses are supported.

5. **Implement the solution.** Once the problem has been identified, defined, and the hypotheses tested, the next step is to implement the solution. This involves putting the solution into practice and monitoring its effectiveness.

6. **Evaluate the solution.** Finally, the solution needs to be evaluated. This involves assessing the impact of the solution and determining if it has effectively solved the problem.
