

Study Guide - Biology 1320 Exam 1 Chapters 1-5

Chapter 1: Scientific Study of Life

- What are the 5 characteristics of all living creatures? Be prepared to define them and recognize examples of each. If I give you a set of conditions, can you tell me which of the 5 characteristics are appropriate?
 1. Cellular Organization: cell is the basic unit of life that encloses a variety of structures and chemicals in a fluid environment.
 2. Metabolism: how we acquire energy and how we use that energy (autotrophs and heterotrophs)
 3. Homeostasis: maintenance of internal consistency
 4. Reproduction, growth, and development: every organism becomes larger over time, and are reproduced sexually or asexually.
 5. Hereditary/Evolution: the change in the DNA of a population over time, evolution can explain similarities found among different types of organisms.
- Can you list the levels of organization from smallest to largest? Start with the atom and end with the organism.
 1. Atom
 2. Molecule
 3. Cell
 4. Tissue
 5. Organ
 6. Organ system
 7. Organism
- Define and be able to recognize emergent properties.
 - Arise at each level of biological organization
 - Something the cell wouldn't do individually but can do when supported by a group and under the right circumstances.
- Understand the basis of homeostasis. Using sweat as an example, how does sweating return body temperature to a normal range?
 - Homeostasis is simply trying to maintain a sense of "normality" or consistency
 - Maintaining relatively constant internal conditions
 - Sweating cools the temperature of your skin to keep you at a consistent body temperature, therefore regulating itself.
- Define autotroph and heterotroph and be prepared to use contextual clues to identify the way a given organism acquires energy.
 - Autotroph: makes own food (plants capture sunlight through photosynthesis to create energy)
 - Heterotroph: must consume something else to get energy (consumers eat other organisms)

Production Test and Evaluation of Large UF₄-Mg Briquettes William E. Shaw, 1962 **Standard Methods of Chemical Analysis** Wilfred Welday Scott, 1925 *Index of Specifications and Standards*, 2005 *Standard Methods of Chemical Analysis: Special subjects* Wilfred Welday Scott, 1925 **Journal of Research of the National Bureau of Standards**, 1962 *Materials Handbook* François Cardarelli, 2018-07-09

The unique and practical *Materials Handbook* third edition provides quick and easy access to the physical and chemical properties of very many classes of materials. Its coverage has been expanded to include whole new families of materials such as minor metals, ferroalloys, nuclear materials, food, natural oils, fats, resins, and waxes. Many of the existing families, notably the metals, gases, liquids, minerals, rocks, soils, polymers, and fuels, are broadened and refined with new material and up to date information. Several of the larger tables of data are expanded and new ones added. Particular emphasis is placed on the properties of common industrial materials in each class. After a chapter introducing some general properties of materials, each of twenty-four classes of materials receives attention in its own chapter. The health and safety issues connected with the use and handling of industrial materials are included. Detailed appendices provide additional information on subjects as diverse as crystallography, spectroscopy, thermochemical data, analytical chemistry, corrosion resistance, and economic data for industrial and hazardous materials. Specific further reading sections and a general bibliography round out this comprehensive guide. The index and tabular format of the book makes light work of extracting what the reader needs to know from the wealth of factual information within these covers. Dr. François Cardarelli has spent many years compiling and editing materials data. His professional expertise and experience combine to make this handbook an indispensable reference tool for scientists and engineers working in numerous fields ranging from chemical to nuclear engineering. Particular emphasis is placed on the properties of common industrial materials in each class. After a chapter introducing some general properties of materials, materials are classified as follows: ferrous metals and their alloys, ferroalloys, common nonferrous metals, less common metals, minor metals, semiconductors and superconductors, magnetic materials, insulators and dielectrics, miscellaneous electrical materials, ceramics, refractories and glasses, polymers and elastomers, minerals, ores and gemstones, rocks and meteorites, soils and fertilizers, construction materials, timbers and woods, fuels, propellants and explosives, composite materials, gases, liquids, food, oils, resin, and waxes, nuclear materials, food materials.
