in different parts of Eurasia throughout history are products of geopolitics and unique to the different regions The book considers the systematic and tight representation of ideas by famous figures including Kautlya and Sun Tzu At the same time it also highlights publications on military affairs by small men like mid ranking officers and scattered ideas regarding the origin nature and societal impact of organised violence present in miscellaneous sources like coins inscriptions paintings and fictional literature In so doing the book fills a historiographical gap in scholarship on military thought which marginalises Asia to the part of cameo and historicises the evolution of theory and the praxis of warfare The volume shows that the East has a long unbroken tradition of conceptualising war and its place in society from the Classical Era to the Information Age It is essential reading for those interested in the evolution of military thought throughout history particularly in Asia

Identity in a Secular Age Fern Elsdon-Baker,Bernard Lightman,2020-09-15 Although historians have suggested for some time that we move away from the assumption of a necessary clash between science and religion the conflict narrative persists in contemporary discourse But why And how do we really know what people actually think about evolutionary science let alone the many and varied ways in which it might relate to individual belief In this multidisciplinary volume experts in history and philosophy of science oral history sociology of religion social psychology and science communication and public engagement look beyond two warring systems of thought They consider a far more complex multifaceted and distinctly more interesting picture of how differing groups along a spectrum of worldviews including atheistic agnostic and faith groups relate to and form the ongoing narrative of a necessary clash between evolution and faith

By ascribing agency to the public from the nineteenth century to the present and across Canada and the United Kingdom this volume offers a much more nuanced analysis of people's perceptions about the relationship between evolutionary science religion and personal belief one that better elucidates the complexities not only of that relationship but of actual lived experience
