Composition in Sport, Exercise and Health Arthur Stewart, Laura Sutton, 2012-06-25. The analysis of body composition (fat, bone, and muscle) is an important process throughout the biomedical sciences. This is the first book to offer a clear and detailed introduction to the key methods and techniques in body composition analysis and to explain the importance of body composition data in the context of sport, exercise, and health. With contributions from some of the world's leading body composition specialists, the book goes further than any other in demonstrating the practical and applied value of body composition analysis in areas such as performance sport and weight control in clinical populations. The book pays particular attention to the important concept of change in body composition and includes discussion of ethical issues in the collection, interpretation, and presentation of data and considerations when working with special populations. Bridging the gap between research methods and practical application, this book is important reading for advanced students and practitioners working in sport and exercise science, health science, anatomy, nutrition, physical therapy, or ergonomics. **Human Anatomy & Physiology**

Elaine Nicpon Marieb, Katja Hoehn, 2010. With the Eighth Edition of the top-selling Human Anatomy Physiology with MyA P text, trusted authors Elaine N. Marieb and Katja Hoehn have produced the most accessible, comprehensive, up-to-date, and visually stunning anatomy physiology textbook on the market.
