

Endocrine System Coloring Activity

Name: _____

The Endocrine System

Introduction: Hormones are often referred to as "chemical messengers." These tiny messengers are created and released by one organ, and into the bloodstream, and regulate the activity of another organ or cell. For example, adrenaline is created and released by the **adrenal glands**. It is sent into the bloodstream and has impacts on many other organs in our body, such as the heart. Adrenaline can only get heart rate to increase in a stressful situation. The **ovarian glands** and **testes** are in completely different body systems, but thanks to hormones these organs can "communicate."

Many organs in the human body have **endocrine glands** and a smaller group of organs that make and release hormones into the bloodstream. These glands can be found throughout the body and collectively make up the **endocrine system**. In this activity, you will read about each endocrine gland, what it does, and finally color which hormones it produces.

1. What is a hormone?
2. What is an example of a hormone?
3. Which type of glands make hormones?

Hypothalamus

If you've studied the nervous system, you are familiar with the **hypothalamus**, a part of the brain. The **hypothalamus** receives information from the brain and bloodstream on the conditions of the body. It responds to this information by creating hormones, which it then sends to the **pituitary gland**, which hangs from the hypothalamus. The **pituitary gland** either responds to or sends these hormones back to the hypothalamus.

Two hormones that the hypothalamus makes and sends to the **anterior pituitary gland** are **growth hormone** and **adrenocorticotropic hormone**.

Two hormones that the hypothalamus makes and sends to the **posterior pituitary gland** are **oxytocin** and **antidiuretic hormone**.

4. How does the endocrine system relate to the hypothalamus looking up?
5. Which hormone does the hypothalamus create?
6. Which hormone does it send back up?
7. Which hormone does it send back up?

Anatomy of the Endocrine System

The **thyroid** is located below the larynx and is part of the endocrine system. It produces **thyroxine**, which regulates the body's metabolism. The **thyroid gland** is located in the neck.

The **adrenal glands** are located on top of the kidneys. Each adrenal gland has two parts: the **adrenal cortex** and the **adrenal medulla**.

The **adrenal cortex** produces three types of hormones: **cortisol**, **aldosterone**, and **androgens**. The **adrenal medulla** produces **epinephrine** and **norepinephrine**.

The **testes** in males and **ovaries** in females produce **testosterone** and **estrogen**, respectively. These hormones regulate the development and function of the reproductive system.

18. Which hormone from the anterior pituitary triggers the adrenal cortex to produce hormones?
