

## **3. Environmental**

Finally, organizations can be measured over long-term timeframes. This means it's important to measure long-term trends rather than short-term fluctuations because environmental issues are often slow-moving. When measured in this manner, organizations can better track their progress towards their goals. However, it's important to remember that "environmental sustainability" does not mean that organizations should ignore other types of sustainability issues.

Environmental sustainability may be considered a subset of organizational sustainability. Many factors are involved in environmental sustainability. These include energy efficiency, waste reduction, recycling, and other environmental factors such as water usage. However, many organizations believe that environmental sustainability is the cornerstone of organizational sustainability.

## **Ecological Levels of Organizations**

The ecological levels of organizations are often referred to as layers. Organizations have multiple layers of sustainability. These layers include basic environmental initiatives such as recycling, energy efficiency, and waste reduction.

The top layer of organizations are those that have the most significant impact on the environment. These organizations include corporate responsibility, recycling, and plant maintenance. Below this layer are those organizations that are focused on energy efficiency and waste reduction. These organizations include environmental management systems, green building certification, and similar programs.

On the bottom layer are those organizations that have the least impact on the environment. These organizations include recycling, energy efficiency, and plant maintenance. These organizations include environmental management systems, green building certification, and similar programs.

**i) Individual**: An organization's individual level of sustainability is its focus on the people and their well-being.

Individuals in this category measure all activities that are related to the well-being of their employees, customers, and stakeholders.

For example, an organization might focus on employee health and well-being through nutrition, exercise, and mental health programs. It might also focus on providing more sustainable transportation options such as electric vehicles and cycling programs. These would all contribute to an organization's individual level of sustainability by improving its employees' overall well-being.

**ii) Institutional**: An organization's institutional level of sustainability is its focus on the organization's operations. This includes how the organization uses energy, water, and resources. These institutions include facilities like buildings and infrastructure, as well as equipment and processes used for production and delivery.
