Food Fights Charles C. Ludington, Matthew Morse Booker, 2019-08-29 What we eat where it is from and how it is produced are vital questions in today s America We think seriously about food because it is freighted with the hopes fears and anxieties of modern life Yet critiques of food and food systems all too often sprawl into jeremiads against modernity itself while supporters of the status

quo refuse to acknowledge the problems with today's methods of food production and distribution Food Fights sheds new light on these crucial debates using a historical lens Its essays take strong positions even arguing with one another as they explore the many themes and tensions that define how we understand our food from the promises and failures of agricultural technology to the politics of taste In addition to the editors contributors include Ken Albala Amy Bentley Charlotte Biltekoff Peter A Coclanis Tracey Deutsch S Margot Finn Rachel Laudan Sarah Ludington Margaret Mellon Steve Striffler and Robert T Valgenti

Sustainable Energy Solutions in Agriculture Jochen Bundschuh, Guangnan Chen, 2014-03-07 Sustainability in agriculture and associated primary industries which are both energy intensive is crucial for the development of any country Increasing scarcity and resulting high fossil fuel prices combined with the need to significantly reduce greenhouse gas emissions make the improvement of energy efficient farming and increased use of renewable energy sources a high priority

Food for Life F. Deatherage, 2013-06-29 This book is addressed to the university student who is not a science major and to the general reader An attempt is made to present an integrated view of some of the basic concepts of physical biological and social sciences relevant to the problem of providing people with food The application of these disciplines has led to our present technologies of medicine agriculture and food science on which modern civilization rests Technical information concerning foods has increased enormously in the less than a century that the basic concepts of the science of nutrition have been recognized Scientific agriculture to provide food for an ever growing population is scarcely a century and a half old Feeding oneself is a very personal matter and at the same time feeding large groups is the concern of society as a whole Therefore it is understandable that in one way or another the problems of food production and distribution underlie the actions of politicians bureaucrats the leaders of government and business managers These situations of our modern life make rational and sound solutions to food problems difficult and often contribute to alarmism founded on partial scientific truth taken out of context The trend toward more consumerism is unmistakable But to serve the individual best such movements must be based on sound judgments and reasoned scientific principles rather than on the often emotional compromises of opportunistic politicians lawyers and businessmen That man requires wholesome nutritious food is indisputable
