and Anti-Idling Systems Yanjun Huang,Soheil Mohagheghi Fard,Milad Khazraee,Hong Wang,Amir Khajepour,2022-05-31 As public attention on energy conservation and emission reduction has increased in recent years engine idling has become a growing concern due to its low efficiency and high emissions Service vehicles equipped with auxiliary systems such as refrigeration air conditioning PCs and electronics usually have to idle to power them The number of service vehicles e g public school tour buses delivery refrigerator trucks police cars ambulances armed vehicles firefighter vehicles is increasing significantly with tremendous social development Therefore introducing new anti idling solutions is inevitably vital for controlling energy unsustainability and poor air quality There are a few books about the idling disadvantages and anti idling solutions Most of them are more concerned with different anti idling technologies and their effects on the society rather than elaborating an anti idling system design considering different applications and limitations There is still much room to improve existing anti idling technologies and products In this book we took a service vehicle refrigerator truck as an example to demonstrate the whole process of designing optimizing controlling and developing a smart charging system for the anti idling purpose The proposed system cannot only electrify the auxiliary systems to achieve anti idling but also utilize the concepts of regenerative braking and optimal charging strategy to arrive at an optimum solution Necessary tools algorithms and methods are illustrated and the benefits of the optimal anti idling solution are evaluated *2020 Collector Car Price*
