medical discipline defined as that science which teaches the application of every branch of medical knowledge to the purpose  
of the law Alfred Swaine Taylor Forensic Medicine deals with medical evidence not only in practice but also in research and  
furthermore all legal essentials in health care especially for doctors are part of teaching training and research Several steps  
in the development of Forensic Medicine can be distinguished At first the use of medical knowledge for legal and public  
purposes Secondly the compulsory medical testimony for the guidance of judges Thirdly the professionalization as an own  
academic discipline The development and existence of a speciality of Forensic Medicine depends essentially on two factors on  
a sufficiently high development of the law and on a sufficiently high development of medicine The period of
