**Production Yield of Muon-Induced Neutrons in Lead** Holger Kluck, 2015-07-28 The work presented in this book is a major step towards understanding and eventually suppressing background in the direct search for dark matter particles scattering off germanium detectors Although the flux of cosmic muons is reduced by many orders of magnitude in underground laboratories the remaining energetic muons induce neutrons through various processes neutrons that can potentially mimic a dark matter signal This thesis describes the measurement of muon induced neutrons over more than 3 years in the Modane underground laboratory The data are complemented by a thorough modeling of the neutron signal using the GEANT4 simulation package demonstrating the appropriateness of this tool to model these rare processes As a result a precise neutron production yield can be presented Thus future underground experiments will be able to reliably model the expected rate of muon induced neutrons making it possible to develop the necessary shielding concept to suppress this background component

**A First Level Trigger Approach for the CBM Experiment** Christian Alexander Steinle, 2012 In view of the very heavy CBM experiment constraints on the first level trigger no conventional trigger is obviously applicable Hence a fast trigger algorithm with the goal of realization in reconfigurable hardware had to be developed to fulfil all requirements of the experiment In this

connection the general Hough transform which is already utilized in several other experiments is used as a basis This approach constitutes further a global method for tracking which transforms all particle interaction points with the detector stations by means of a defined formula into a parameter space corresponding to the momentum of the particle tracks This formula is of course developed especially for the given environment of CBM and defines thus the core of the applied three dimensional Hough transform As the main focus of attention is furthermore on the realization of the needed data throughput the necessary complex formula calculations give reason to outsource predefined formula results in look up tables This circumstance offers then collaterally the possibility to utilize any other sufficiently precise method like Runge Kutta of fourth order for example to compute these look up tables because this computation can be evidently done offline without any effect on the Hough transform s processing speed For algorithm simulation purposes the CBMROOT framework provides the module htrack which is written in the programming language C This module includes many analyses for the determination of algorithm parameters which can be even executed automatically to some extent In addition to this there are of course also analyses for the measurement of the algorithm s quality as well as for the individual rating of each partial step of the algorithm Consequently the milestone of a customizable level one tracking algorithm which can be used without any specific knowledge is now obtained Besides this the investigated concepts are explicitly considered in the implement Principles of Radiation Interaction in Matter and Detection Claude Leroy, 2012 This book like the first and second editions addresses the fundamental principles of interaction between radiation and matter and the principles of particle detection and detectors in a wide scope of fields from low to high energy including space physics and medical environment It provides abundant information about the processes of electromagnetic and hadronic energy deposition in matter detecting systems performance of detectors and their optimization The third edition includes additional material covering for instance mechanisms of energy loss like the inverse Compton scattering corrections due to the Landau OCoPomeranchuk OCoMigdal effect an extended relativistic treatment of nucleus OConucleus screened Coulomb scattering and transport of charged particles inside the heliosphere Furthermore the displacement damage NIEL in semiconductors has been revisited to account for recent experimental data and more comprehensive comparisons with results previously obtained This book will be of great use to graduate students and final year undergraduates as a reference and supplement for courses in particle astroparticle space physics and instrumentation A part of the book is directed toward courses in medical physics The book can also be used by researchers in experimental particle physics at low medium and high energy who are dealing with instrumentation
