Question: In what conditions will seed B and seed C have the highest germination rate?

1. Observe: Run two experiments with seed B. What did you observe?

I saw that the biggest impact on the rate of germination would come from changing the water.

2. Form a hypothesis: What conditions do you think will be ideal for germinating seed B?

A high water content, warm temperature, and moderate amount of light would be optimal conditions for germination.

3. Draw conclusions: What conditions gave the best germination rate for seed B?

A high water drop rate per hour, medium light levels, and low temperatures would result in the ideal germination rate for seed B.

4. Compare: Study the results of your experiments with seed A and seed B.

- A. Which variable(s) affected seed B that did not affect seed A?
- B. Based on this fact, do you think seed B is normally planted deep below the soil or near the surface?

While seed A was unaffected, seed B was affected by the light.

Shallow hole, as the seed would receive more light if it were put close to the surface.

5. Observe: Run two experiments with seed C. What did you observe?

I observe that if we change the value of light then it would have the biggest effect on germination rate.

6. Form a hypothesis: What conditions do you think will be ideal for germinating seed C?

The best rate of germination for see C is when there is a medium amount of water, a lot of light, and a cool environment.
