

Work, Power and Energy – Summary Notes

Work

- Work is said to be done when a force produces a displacement of a body.
- The amount of work done by a force is equal to the product of the force and the displacement of the point of application of the force in the direction of force.
 $\text{Work} = \text{Force} \times \text{Displacement of point of application in the direction of force or } W = F \times S$
- If there is no motion produced in the body even if a force acts on it, the work done is said to be zero, i.e., no work is done.
- If a force F is acting on a body and it displaces the body such that the displacement is at an angle θ to the direction of force, then:
 $\text{Work done} = \text{Force} \times \text{Component of displacement in the direction of force}$
or $W = F \times S \cos \theta$
 - If the displacement is in the direction of force, i.e., $\theta = 0^\circ$, then $\cos 0^\circ = 1$.
 $\therefore W = F \times S$
In this case, the work done is maximum and positive.
 - If the displacement is normal to the direction of force, i.e., $\theta = 90^\circ$, then $\cos 90^\circ = 0$.
 $\therefore W = F \times S \cos 90^\circ = 0$
In this case, the work done is zero.
- Work done by the force of gravity, $W = mgh$, where m = mass of the body, g = acceleration due to gravity, and h = height of the body from the earth's surface.
- The work done by the force of gravity is the same whether a person comes down from a certain height using a staircase or he comes down from the same height using a lift.
- Since both force and displacement are vector quantities, therefore, work is scalar quantity. In vector form, it is written as:
 $W = \vec{F} \cdot \vec{S}$ [$\because$ The dot product of two vectors is a scalar]
- The SI unit of work is joule abbreviated as J. 1 joule of work is said to be done when a force of 1 newton displaces a body through 1 metre in its own direction.
- The MKS unit of work is $\text{kg m}^2 \text{s}^{-2}$.
- The CGS unit of work is erg. 1 erg of work is said to be done when a force of 1 dyne displaces a body through 1 cm in its own direction.

POWER

- Power is the rate of doing work. It is measured as the amount of work done in one second.

$$\text{Power, } P = \frac{\text{Work done}}{\text{Time taken}}$$
or
$$P = \frac{W}{t} = \frac{F \cdot S}{t}$$
