manage a JOSHUA data base and execute JOSHUA modules on VAX VMS and IBM MVS computer systems This manual  
provides instructions for using the JS routines and information about the internal data structures and logic used by the  
routines It is intended for use primarily by JOSHUA systems programmers however advanced applications programmers may  
also find it useful The JS routines are as far as possible written in ANSI FORTRAN 77 so that they are easily maintainable and  
easily portable to different computer systems Nevertheless the JOSHUA system provides features that are not available in  
ANSI FORTRAN 77 notably dynamic module execution and a data base of named variable length unformatted records so  
some parts of the routines are coded in nonstandard FORTRAN or assembler as a last resort In most cases the nonstandard  
sections of code are different for each computer system To make it easy for programmers using the JS routines to avoid  
naming conflicts the JS routines and common block all have six character names that begin with the characters open\_quotes  
JS close\_quotes Before using this manual one should be familiar with the JOSHUA system as described in open\_quotes The
