CHAPTER 8

WELDED TRUSS CONNECTIONS

OVERVIEW

Chapter 8 contains design information for HSS-to-HSS truss connections in which (web) members are directly welded to a continuous chord that passes through a connection. All connections are assumed to be gusset, predominantly statically loaded, to non-overlapping brackles and to be primarily axially loaded. Connection types or include unstiffened T-, Y-, gapped K-, and cross-connections, as well as some in form reinforced by plate stiffeners. Design information is based primarily on D1.1-96, supplemented by selected design information from Packer and Housh (1997) and the AISC HSS Specification. Design information for overlapped K-connections can be found in AISC D1.1-96. Information relative to stiffening of joints in concrete filling can be found in Packer and Henderson (1992).

Following is a list of the Chapter content:

TERMINOLOGY AND ECONOMY	
T-, Y-, GAPPED K-, AND CROSS-CONNECTIONS
