Locking Performance In Centralized Databases Y C Tay:

   Locking Performance in Centralized Databases Y.C. Tay,2014-05-10 Perspectives in Computing Locking Performance in Centralized Databases reports some results from a project whose aim was the development of a performance model for concurrency control algorithms This book proposes a model that is powerful enough to help users understand compare and control the performance of the algorithms Organized into four chapters this book begins with an overview of the model in its simplest form This text then explains locking which uses a combination of blocking and restarts to achieve correctness Other chapters test the model and the method of analysis by comparing the model s predictions to simulation results wherein the prediction and simulations indicate that restarts can cause thrashing This book discusses as well the formula for throughput and for the restart rate The final chapter deals with the adaptation of the model to timestamping and distributed algorithms This book is a valuable resource for mathematicians and research workers   Performance Evaluation: Origins and Directions Günter Haring,Christoph Lindemann,Martin Reiser,2003-06-29 This monograph like state of the art survey presents the history the key ideas the success stories and future challenges of performance evaluation and demonstrates the impact of performance evaluation on a variety of different areas through case studies in a coherent and comprehensive way Leading researchers in the field have contributed 19 cross reviewed topical chapters competently covering the whole range of performance evaluation from theoretical and methodological issues to applications in numerous other fields Additionally the book contains one contribution on the role of performance evaluation in industry and personal accounts of four pioneering researchers describing the genesis of breakthrough results The book will become a valuable source of reference and indispensable reading for anybody active or interested in performance evaluation   *Database Concurrency Control* Alexander Thomasian,2013-03-09 Database Concurrency Control Methods Performance and Analysis is a review of developments in concurrency control methods for centralized database systems with a quick digression into distributed databases and multicomputers the emphasis being on performance The main goals of Database Concurrency Control Methods Performance and Analysis are to succinctly specify various concurrency control methods to describe models for evaluating the relative performance of concurrency control methods to point out problem areas in earlier performance analyses to introduce queuing network models to evaluate the baseline performance of transaction processing systems to provide insights into the relative performance of transaction processing systems to illustrate the application of basic analytic methods to the performance analysis of various concurrency control methods to review transaction models which are intended to relieve the effect of lock contention to provide guidelines for improving the performance of transaction processing systems due to concurrency control and to point out areas for further investigation This monograph should be of direct interest to computer scientists doing research on concurrency control methods for high performance transaction processing systems designers of such systems and professionals concerned with improving tuning the performance of
