[The Long Haul Pioneers](#) Ashley Coghill, 2020-02-01 It all started in 1964 when two friends gave up promising medical careers to embark upon a journey which few hardened truckers would have considered In so doing they were solely responsible for creating the first long haul overland route across Europe and deep into the Middle East to Kabul The men had started the Middle East Run was to become a phenomenon in the road haulage industry an image which it still holds today This book is about the company founded by one of those men from its fledgling days as Asian Transport to the thriving Astran Cargo Services Ltd that it is today In this book Ashley Coghill documents the complete history of the company to date with the focus predominantly on the early days when the men were fighting for something and revelling in the adventure These early long haul drivers would think nothing of a 10 000 mile round trip to Iran or the Arabian Gulf and being stranded at 6 000 feet on a mountain pass with temperatures below 40 was just all in a day s work Ashley Coghill has an immense enthusiasm for his subject and has given his research total dedication He has also tracked down past and present employees to gather first hand information which he has illustrated with over 300 carefully selected images The end result is a detailed comprehensive and fascinating account of an extraordinary company

Methods of Studying Root Systems W. Böhm, 2012-12-06 Root research under natural field conditions is still a step child of science The reason for this is primarily methodological The known methods are tedious time consuming and the accuracy of their results is often not very great Many research workers have been discouraged by doing such root studies The need for more information on the development and distribution of plant roots in different soils under various ecological conditions is however obvious in many ecological disciplines Especially the applied botanical sciences such as agriculture horticulture and forestry are interested in obtaining more data on plant roots in the soil This book will give a survey of existing methods in ecological root research Primarily field methods are presented techniques for pot experiments are described only so far as they are important for solving ecological problems Laboratory methods for studying root physiology are not covered in this book Scientific publications on roots are scattered in many different journals published all over the world By working through the international root literature I found that about ten thousand papers on root ecology have been published at the present This is not very much compared with the immense literature on the aboveground parts of the plants but is however too much to cite in this book *Catalog of Copyright Entries. Silviculture , 1989 *Utilization of Residual Forest Biomass* Pentti Hakkila, 2012-12-06 An increase in the demand for wood results in improved recovery and less residual biomass in the forests Paradoxically interest in forest residue as a renewable source of raw material seems to be in a reverse ratio to its availability in a certain area Finland and Sweden are probably more dependent on forestry and forest industries than any other developed countries in the world A sufficiency of raw material for integrated forest industries is vital for the national economy of both countries and a great deal of attention is being paid to the long term potential of unutilized biomass left behind in logging operations Furthermore since these

countries possess no reserves of fossil fuels and since their per capita consumption of primary energy is exceptionally high they also consider unmerchantable forest biomass a realistic source of indigenous energy A joint Nordic research project on harvesting and utilization of logging residue was carried out in 1969 1976 under the auspices of the Nordic Research Council on Forest Operations This fruitful cooperation soon gave rise to related national projects in Sweden Finland Norway and Denmark stimulating further research and producing practical applications Concurrently particularly after the worldwide energy crisis in 1973 research on all aspects of utilization of forest biomass mushroomed in the United States Canada and the Soviet Union An explosive increase occurred in both the number and diversity of biomass studies
