Confocal Microscopy for Biologists Alan R. Hibbs, 2004-04-30 There has been a great upsurge in

interest in light microscopy in recent years due to the advent of a number of significant advances in microscopy one of the most important of which is confocal microscopy Confocal microscopy has now become an important research tool with a large number of new fluorescent dyes becoming available in the past few years for probing your pet structure or molecule within fixed or living cell or tissue samples Many of the people interested in using confocal microscopy to further their research do not have a background in microscopy or even cell biology and so not only do they find considerable difficulty in obtaining satisfactory results with a confocal microscope but they may be misled by how data is being presented This book is intended to teach you the basic concepts of microscopy fluorescence digital imaging and the principles of confocal microscopy so that you may take full advantage of the excellent confocal microscopes now available This book is also an excellent reference source for information related to confocal microscopy for both beginners and the more advanced users For example do you need to know the optimal pinhole size for a 63x 1.4 NA lens Do you need to know the fluorescence emission spectrum of Alexa 568 Access to the wealth of practical information in this book is made easier by using both the detailed index and the extensive glossary

The Era of Assisted Reproductive Technologies Tailored to the Specific Needs of Species, Industry and Case Reports David Martín Hidalgo,2021-08-16 Nowadays assisted reproductive technologies ARTs have a pivotal role not only in achieving fertilization in subfertile animals but they are also involved in the management of the

herd decreasing disease spread and even allowing offspring sex selection. Nonetheless, there are differences between species or even within species that have led researchers worldwide to focus on those differences in order to bypass these specific difficulties. This Special Issue, titled "The Era of Assisted Reproductive Technologies Tailored to the Specific Needs of Species Industry and Case Reports" and published in *Animals*, is composed of 12 original manuscripts and three reviews that offer an overview of current and future ARTs used to improve reproductive outcomes, mainly focused on farm animals such as horse, pig, bovine, rabbit, and ovine species. Thus, the Special Issue covers information from the classical point of view, including comparative studies of different semen extenders, to the most advanced technologies of sperm selection by chemotaxis or chemoattractants, as well as the improvement of sperm features by red light irradiation. The female and embryo contributions to ART outcomes are also covered, for instance, with a study that improves our knowledge by the metabolomic description of follicular fluid composition or the description of better culture conditions of oocytes. In brief, this Special Issue provides a balanced overview of emerging techniques and technologies used to preserve, improve, rescue, or even create fertility for domestic farm animals with high economic impact.
