Beginning with the pocket calculator in 1964 there have been many increasingly complex applications followed. In fact, processing gates and memory storage on a chip have since then grown at an exponential rate following Moore's Law. Moore himself admitted that Moore's Law had turned out to be more accurate, longer lasting and deeper in impact than he ever imagined. With greater device integration, various signal processing systems have been realized for many killer IT applications. Further breakthroughs in computer sciences and Internet technologies have also catalyzed large scale system integration. All these have led to today's IT revolution which has profound impacts on our lifestyle and overall prospect of humanity. It is hard to imagine life today without mobiles or Internets. The success of SPS requires a well concerted integrated approach from multiple disciplines such as device design and application.
