Hyperlocal Lucy Bullivant, 2017-03-23 4D Hyperlocal A Cultural Tool Kit for the Open source City The evolution of digital
tools is revolutionising urban design planning and community engagement This is enabling a new hyperlocal mode of design
made possible by geolocation technologies and GPS enabled mobile devices that support connectivity through open source
applications Real time analysis of environments and individuals input and feedback bring a new immediacy and
responsiveness Established linear design methods are being replaced by adaptable mapping processes real time data streams
and experiential means fostering more dynamic spatial analysis and public feedback This shifts the emphasis in urban design
from the creation of objects and spaces to collaboration with users and from centralised to distributed participatory systems
Hyperlocal tools foster dynamic relational spatial analysis making their deployment in urban and rural contexts challenged by
transformation particularly significant How can hyperlocal methods solutions including enterprise driven uses of technology
for bioclimatic design and contexts influence each other and support the evolution of participatory architectural design What
issues for example arise from using real time data to test scenarios and shape environments through 3D digital visualisation
and simulation methods What are the advantages of using GIS with its integrative and visualising capacities and relational
