Construction Project Management

Peter Fewings,Christian Henjewe,2019-03-21 Construction Project Management An Integrated Approach is a management approach to leading projects and the effective choice and use of project management tools and techniques It seeks to push the boundaries of project management to take on board future needs and user issues Integration of the construction project meaning closer relations between the project team the supply chain and the client is long overdue however despite some signs of growth in this area the industry nonetheless remains fragmented in its approach The role of the project manager is to integrate diverse interests and unify objectives to achieve a common goal This has now broadened to include a responsibility on the parts of both client and team to ensure that construction addresses current and future societal needs From an economic perspective a great deal of waste is connected with conflict thus a holistic approach that increases the efficiency and effectiveness of the task at hand will inject energy into project management This third edition now takes on board the impact of technology in building information modelling and other digitised technologies such as artificial intelligence Together they open up avenues for more direct and incisive action to test creative design manufacture directly and communicate spontaneously and intuitively In time such technologies will change the role of project managers but will never take away their responsibility to be passionate about construction and to integrate the team A new chapter has been

added that considers future societal needs This edition is also reordered to make the project life cycle and process chapters clearer This book combines best practice in construction with the theories underpinning project management and presents a wealth of practical case studies many new It focuses on all construction disciplines that may manage projects The book is of unique value to students in the later years of undergraduate courses and those on specialist postgraduate courses in project management and also for practitioners in all disciplines and clients who have experienced the frustration caused by the fragmentation of construction projects

Managing Innovative Projects and Programs H. James Harrington, Sid Ahmed Benraouane, 2022-07-15 It has been estimated that over 75% of the innovative projects that begin through the Innovation Management System IMS are either failures or they failed to produce the desired results The biggest wastes most medium to large size organizations face are the waste of money time reputation opportunity and income that these failures are costing them Following this book's recommendations could reduce this failure cost by as much as 70% The purpose of this book is to provide a step by step procedure on how to process a medium or large size project program or product using an already established IMS that considers the guidance given in ISO 56002 2019 Innovation Management Systems Standard Often the most complicated complex difficult and challenging system used in an organization is the IMS At the same time it usually is the most important system because it is the one that generates most of the value adding products for the organization and it involves most of the key functions within the organization The opportunity for failure in time and the impact on the organization is critical and often means the difference between success and bankruptcy Throughout this book the authors detail the high impact inputs and activities that are required to process individual projects programs products through the innovation cycle Although this book was prepared to address how medium to large projects programs and products proceed through the cycle it also provides the framework that can be used for small organizations and simple innovation activities Basically the major difference between large and small impact innovation projects is that the small projects can accept more risks require less formal documentation use simpler communication systems and require fewer resources It's important to remember that the authors are addressing an existing IMS rather than trying to create an entirely new one Currently this is the only book geared for professionals responsible for managing innovative projects and programs using ISO 56002 2019 Innovation Management Innovation Management System Guidance to provide a comprehensive management strategy and step by step plan and ISO 56004 Innovation Management Assessment Guidance It provides a comprehensive analysis of what is required from the time an opportunity is recognized to the time the customer is using the innovative product The book also introduces a new Process modeling cloud service that allows you to drill down 5 levels from the system level to the job description level and includes free access to many of the book's best practice Process models
