Plant Detective's Manual Gonzalo M. Estavillo,Ulrike Mathesius,Michael Djordjevic,Adrienne B. Nicotra,2014-11-03 If global
 challenges in food production and the impact of ever declining biodiversity are to be tackled every country will need plant
 biologists who have a deep understanding of plant morphology physiology and genetics and how these interact to affect plant
 function in changing environments These scientists will also need the capacity to use an effective and powerful set of
 technologies and research strategies To prepare and inspire our students to become that next generation of researchers and
 to instill a meaningful involvement in research we created an integrated set of laboratory investigations that we felt truly
 reflected the mysteries of plant biology and puzzle solving processes that we had encountered in our research experience
 Rather than a set of unconnected experimental activities we created a series of closely related experiments that focused on
 solving mysteries in the life of the plant *Arabidopsis thaliana* thale cress The activities charge students with finding the
 suspect gene responsible for the specific phenotypes of an unknown *Arabidopsis* mutant which are encountered when they
 expose the plants to different environmental stresses This we hoped would give keen but inexperienced student scientists a
 realistic taste of the joys and frustrations of plant science research Although thrilled by numerous university and national
 awards for our innovative teaching we have been most excited by the interest in our ideas and experimental approaches from
 other plant science educators in Australia and overseas who are also seeking to improve their plant biology curriculum and
 attract more students to plant sciences We are thus proud to present this manual as a gift to our colleagues worldwide Here
 you will find a detailed collection of state of the art procedures in plant biology as well as background information on more
 commonly used techniques and tips for class preparation The concepts and methods we present can be adapted to meet the
 specific needs and expertise of the teaching staff and provide inspiration for scaling up for larger audiences or simplifying for
 more junior classes Through this publication we hope to support our teaching colleagues in making a significant impact on
 improving the learning experience of plant biology students worldwide and hope that we will motivate and inspire a new
