Temperature is how **hot** or **cold** something is.

A thermometer is a tool used to measure temperature.

A thermometer can be used to tell how hot or cold it is outside. It can tell if you have a fever. It can tell the temperature inside your house.

Thermal Energy
All the things around us are made of matter. Matter is made up of very small particles that you cannot see unless you are using a microscope. These particles are always moving. The energy of moving molecules is called thermal energy. The more thermal energy an object has, the faster the particles move. Thermal energy flows from objects to cool objects.

Abstract The purpose of this study was to determine the effect of a 12-week, 30-min, 3 times per week, low-impact aerobically and resistance training program on the physical fitness of sedentary, middle-aged women. The study was a randomized, controlled trial. The subjects were randomly assigned to either an exercise group or a control group. The exercise group performed a 12-week, 30-min, 3 times per week, low-impact aerobically and resistance training program. The control group performed no exercise. The physical fitness of the subjects was measured at baseline and at 12 weeks. The results of the study showed that the exercise group had significantly higher levels of physical fitness than the control group at 12 weeks. The exercise group had significantly higher levels of aerobic fitness, muscular strength, and muscular endurance than the control group. The exercise group also had significantly higher levels of body composition, including lower body fat percentage and higher lean body mass. The control group had no significant changes in physical fitness. The results of this study suggest that a 12-week, 30-min, 3 times per week, low-impact aerobically and resistance training program can improve the physical fitness of sedentary, middle-aged women.
