Culture Won Keith Clarke, 2022-08-25 This book is about the company culture that helped drive Arm Limited's spectacular growth to become the world's leading semiconductor Intellectual Property IP company. Its extremely power efficient processor technology has been licensed to hundreds of semiconductor chip manufacturers and Original Equipment Manufacturers OEMs. Arm is still largely unknown to the broader public yet Arm's technology is nearly ubiquitous and has been a foundational building block of the global rise of the smartphone. Arm based microprocessors power over 95% of the world's mobile phones. However this book is not about technology. It's about how a company grew from being a small start up in Cambridge UK with 12 people and a 1.75m cash investment to a global organization with over 5,000 employees in over 50 countries and more than 1.5bn revenue in 2016 when SoftBank acquired it for 32bn. Arm Limited was founded as Advanced RISC Machines in November 1990 a joint venture between a British computer manufacturer Acorn Computers Limited and its much larger US competitor Apple Computers Inc. The purpose of the new venture was to develop and proliferate the uniquely power efficient and high performance RISC based microprocessor technology that had been developed several years earlier by Acorn. Using first hand interviews with founders and the author's knowledge this book charts some of the key people involved in the birth of the technology and the company Advanced RISC Machines. It considers how their behaviors and decisions led to the creation of the licensing business model and the strategy that underpinned Arm's later success. This book reveals some of the layers that help explain how the combination of culture strategy and execution built the world's leading semiconductor IP company. It provides insight into ten essential ingredients of Arm's success including the company's unique proposition how the early business model and strategy were formed the creation and evolution of the winning culture the ecosystem of shared success and how Arm stayed unified throughout a period of extraordinary growth. The purpose of the book is to help readers create a culture of inclusiveness collaboration and innovation within their own organizations. The book provides examples from Arm's history which should provide inspiration and guidance for making the necessary changes to enable a winning culture. Additional details of interest to history lovers include the stories behind the BBC Microcomputer prototype the Acorn RISC Machine microprocessor development Advanced RISC Machines creation the partnership focused licensing business model's development the nearly lost design win at Nokia for their new GSM mobile the 20 billion selling Cortex M product that almost didn't happen and the battle for smartphones and tablets with Intel.

The Best Interface is No Interface Golden Krishna, 2015 This book gives students a wildly entertaining visionary piece that offers a compelling

License to Spill Rachel Plotnick, 2025-04-29

How everyday wetness from finger smudges sweat and spilled drinks to showering and swimming collides with consumers' media devices designed to stay dry License to Spill investigates the everyday moments activities and spaces where media technologies and liquids collide from disastrous spilled drinks that corrode laptops and drops in the toilet that drown smartphones to the greasy finger smudges and sweat droplets that sully screens and glitch smartwatches Putting historical and present day case studies in conversation Rachel Plotnick considers how people's experiences with media devices inevitably encounter wetness and yet consumers not the companies who make the devices take the blame when leaks spillages and overflows occur Along with thinking about preventive measures and device caretaking License to Spill examines how water resistant and waterproofed technologies through their design and marketing imagine the brawniest and hardest of users meant to punish and abuse their tough devices granting them unfettered permission to get wet Examining a long history of torture testing and hyperbolic claims of imperviousness the book demonstrates how protective designs relate to broader cultural ideas about media use as sporty luxurious excessive or messy This context is especially relevant given that the market for water resistant bags cases coatings and seals has flourished over the past decade with new rhetoric about wetness as natural and digital technologies as ever present The book pushes us to attend to both the ideals and problems that arise when designing resilient devices ranging from the right to repair movement and lawsuits over ingress protection IP ratings to obsolescence culture and work from home activities in the wake of the COVID 19 pandemic
