

Goldfish Tail Circulation Lab

Materials:

Medium-sized goldfish

Dip net

Half of a Petri dish

2 wads of cotton (1 thick/1 thin)

2 halves of a microscope slide

Medicine dropper/dropper bottle w/ H_2O

Compound microscope

Procedure:

1. Soak a thin wad of cotton in water and spread it toward one end of the bottom of a Petri dish. At the other end, place a clean half-slide. Soak a thick wad of cotton in water and have it ready for the next step.
2. Using a net, remove a fish from the water. Place the fish in the Petri dish with its head and body peacefully laying on the wet cotton. Its tail should lie on the half-slide.
3. Now place the thick, soaked wad of cotton over the body of the fish. Place another half-slide over the tail. The setup should look like the figure below (except you very likely have the fish head also covered in cotton, so he can't stare at you. ☹)

If the fish flips its tail out, as it may, just put it back between the glass slides. Remember to keep the cotton wet.

4. Remove the clips from the stage of your microscope. Place the Petri dish on the stage so that the fish's tail is over the hold in the stage.
