

## 1 Description

This programmable thermostat can be connected to an electric heating system such as an electric baseboard, a radiant ceiling, a floor heating system, an electric convector, etc. It is not compatible with a central heating system.

\* Set the switch to Off to cut power to the heater. This will not affect the time and temperature settings.

## 2 Connection

TURN OFF POWER TO THE HEATING SYSTEM AT THE MAIN POWER PANEL TO AVOID ELECTRICAL SHOCK.

- The installation must be carried out by an electrician.
- All cables and connections must conform to the local electrical code.
- Special COOLR solderless connectors must be used when connecting with aluminum conductors.
- Install the thermostat onto an electrical box.
- Install the thermostat about 5 feet high, on an inside wall facing the heater.
- Avoid locations where there are air drafts (such as the top of a staircase or an air outlet), dead air spots (such as behind a door), or direct sunlight.
- Do not install the thermostat on a wall that conceals chimney or stove pipes.

- 1 Connect the thermostat wires to the power and to the load using solderless connectors for copper wires.
- 2 Push the excess wire back into the electrical box to prevent interference with the thermostat.
- 3 Secure the thermostat using two 6-32 screws.
- 4 Return power to heating system.

**NOTE:** Always keep the thermostat's vents clean and unobstructed.

## 3 Configuration

The configuration switches are on the back of the thermostat. Default (factory) settings are inside the gray cells.
