Design Against Blast S. Syngellakis, 2013 Terrorist attacks and other destructive incidents caused by explosives have in recent years prompted considerable research and development into the protection of structures against blast loads For this objective to be achieved experiments have been performed and theoretical studies carried out to improve our assessments of the intensity as well as the space time distribution of the resulting blast pressure on the one hand and the consequences of an explosion to the exposed environment on the other This book aims to enhance awareness on and understanding of these topical issues through a collection of relevant Transactions of the Wessex Institute of Technology articles written by experts in the field The book starts with an overview of key physics based algorithms for blast and fragment environment characterisation structural response analyses and structural assessments with reference to a terrorist attack in an urban environment and the management of its inherent uncertainties A subsequent group of articles is concerned with the accurate definition of blast pressure which is an essential prerequisite to the reliable assessment of the consequences of an explosion Other papers are concerned with alternative methods for the determination of blast pressure based on experimental measurements or neural networks A final group of articles reports investigations on predicting the response of specific structural entities and their contents The book concludes with studies on the effectiveness of steel reinforced polymer in improving the performance of reinforced concrete columns and the failure mechanisms of seamless steel pipes used in nuclear industry

Analysis and Modelling of Composite Materials J.W. Bull, 2012-12-06 Composite materials are increasingly used in many applications because they offer the engineer a range of advantages over traditional materials They are often used in situations where a specified level of performance is required but where the cost of testing the materials under the extremes of those specifications is very high In order to solve this problem engineers are turning to computer Modelling to evaluate the materials under the range of conditions they are likely to encounter Many of these analyses are carried out in isolation and yet the evaluation of a range of composites can be carried out using the same basic principles In this new book the editor has brought together an international panel of authors each of whom is working on the analysis and Modelling of composite materials The coverage of the book is deliberately wide to illustrate that similar principles and methods can be used to model and evaluate a wide range of materials It is also hoped that by bringing together this range of topics the insight gained in the study of one composite can be recognized and utilized in the study of others Professional engineers involved in the specification and testing of composite material structures will find this book an invaluable resource in the course of their work It will also be of interest to those industrial and academic engineers involved in the design development manufacture
