

## Quidway® NetEngine 5000E Core Router Switch Fabric Unit

The Switch Fabric Unit (SFU) on the Quidway® NetEngine 5000E core router (hereinafter referred to as "NE5000E") completes service data switching of the entire system.

The NE5000E has 22 slots, of which four are for SFUs. It is recommended that four SFUs be configured to achieve a switching capacity of 2.56 Tbps and realize redundancy backup to improve the system reliability. Each SFU forms a switching plane and works equally in the system. In the full configuration, the four SFUs work simultaneously and share service data in 3 + 1 load balancing and redundancy backup mode. In this way, if one SFU is damaged or replaced, the other three will automatically take over its service, ensuring the continuity of service data.

The SFU has separate channels to monitor its voltage and temperature and provide over-voltage/overheat alarm and over-current protection. In addition, the on/off state and sequence of its working power supply can be controlled.

The SFU currently supported by the NE5000E is CR52-SFUC. It has no external interfaces but only three external indicators indicating the board operating status.
