

Define osmoregulation

- Control of water levels in the body

Why is it important to control water levels in the body?

- If body cells lose or gain too much water by osmosis they do not function efficiently

What is ultrafiltration?

- The filtering of small molecules from the glomerulus into the Bowman's capsule
- Caused by high pressure in glomerulus
- Glucose, ions, and urea (the glomerular filtrate) enter Bowman's capsule
- Proteins and red blood cells stay in blood - too large to pass through basement membrane

Explain how the structure of the blood vessels entering and leaving the glomerulus help to move glucose into the Bowman's capsule

- Vessel entering is wider than vessel leaving
- This increases pressure
- Causes ultrafiltration
