**Mental Health: A Journey from illness to wellness** S Makvana,A Patel,A Dhingra,V Parmar,2016-10-31 The controls used on emotional arousal and cognitive processes are difficult in several societies because of the presence of beliefs in several more issues and forces which influence the bidirectional to and fro journey of effects between mental health and mental illness Human beings in general accept only experiential methods of verifications and approval of reality when they come in contact with their own mental and physical conditions However many may still be influenced by suggestions and produce experiences as per suggestions which may not respond to scientific methods of verifications and corrections Mental health and diseases mainly in the domain of emotional health may therefore be affected by beliefs and psychological effects produced from cognitive processes and cognitive molding of emotions Interventions in the cognitive and emotional domains do often work and changes may be brought out at the psychological and biological levels
