**Estuarine Ecohydrology** Eric Wolanski, Michael Elliott, 2015-08-20. *Estuarine Ecohydrology* Second Edition provides an ecohydrology viewpoint of an estuary as an ecosystem by focusing on its principal components: the river, the estuarine waters, the sediment, the nutrients, the wetlands, the oceanic influence and the aquatic food web, as well as models of the health of an estuary ecosystem. Estuaries, the intersection of freshwater and coastal ecosystems, exhibit complex physical and biological processes which must be understood in order to sustain and restore them when necessary. This book demonstrates how, based on an understanding of the processes controlling estuarine ecosystem health, one can quantify its ability to cope with human stresses. The theories, models and real world solutions presented serve as a toolkit for designing a management plan for the ecologically sustainable development of estuaries. Provides a sound knowledge of the physical functioning of an estuary, a critical component of understanding its ecological functioning. Ideal reference for those interested in marine biology, oceanography, coastal management and sustainable development. Describes the essentials behind conceptual and numerical models of the health of an estuary ecosystem and how to use these models to quantify both human impacts and the value of remediation and management measures. Chapters are written in an accessible way that encourages collaboration between aquatic, marine and wetland biologists, ecologists, oceanographers, geologists, geomorphologists, chemists and ecosystem modelers. Covers the physical, chemical and biological elements of estuary environments, indicating that the essence of an estuary's functioning lies in its connectivity with the adjacent catchment and the marine coastal system.

***Mangrove Ecosystems: A Global Biogeographic Perspective*** Victor H. Rivera-Monroy, Shing Yip Lee, Erik Kristensen, Robert R. Twilley, 2017-11-03. This book presents a comprehensive overview and analysis of mangrove ecological processes, structure and function at the local, biogeographic and global scales and how these properties interact to provide key ecosystem services to society. The analysis is based on an international collaborative effort that focuses on regions and countries holding the largest mangrove resources and encompasses the major biogeographic and socio-economic settings of mangrove distribution. Given the economic and ecological importance of mangrove wetlands at the global scale, the chapters aim to integrate ecological and socio-economic perspectives on mangrove function and management using a system-level hierarchical analysis framework. The book explores the nexus between mangrove ecology and the capacity for ecosystem services with an emphasis on thresholds, multiple stressors and local conditions that determine this capacity. The interdisciplinary approach and illustrative study cases included in the book will provide valuable resources in data.
